

VetAgent Integration Strategy

Competitive Analysis vs. ezyVet — Prepared for Dr. Goldsmith

Date: July 7, 2026 | Classification: Internal — Strategic Planning

Executive Summary

ezyVet, the IDEXX-owned practice management platform, currently maintains **74 third-party integrations** across 17 categories. Our analysis reveals that the majority of these integrations address gaps in ezyVet's core functionality — gaps that **VetAgent already solves natively through AI**.

Of ezyVet's 74 partners:

- **15** address capabilities VetAgent already has or can build in-house within weeks
- **8** represent high-value partnerships we should pursue strategically
- **51** are niche, regional, or low-priority and can be deferred

The takeaway: VetAgent doesn't need 74 integrations to compete. We need **6 strategic partnerships** combined with our AI advantage — a combination ezyVet cannot replicate.

The Landscape: ezyVet's Integration Ecosystem

ezyVet Integration Categories (74 total)			
Diagnostics & Labs	22	Marketing & Client Comms	12
Finance & Analytics	8	Patient Care	4
Digital Imaging	4	Product Suppliers	3
Online Pharmacy	3	Mobile	3
Insurance	2	Inventory Management	2
Controlled Drugs	2	Telemedicine	2
Microchips	2	Referrals	2
Payments	1	Other	3

[!NOTE] **Key insight:** Diagnostics & Labs account for nearly **30%** of ezyVet's integrations. This is because ezyVet has no built-in lab functionality — every lab connection requires a separate partner deal. The 12 marketing/comms integrations tell a similar story: ezyVet's native client communication is limited, forcing clinics to bolt on third-party tools.

Where VetAgent Already Wins

VetAgent's AI-first architecture means several entire categories of ezyVet integrations are **already obsolete** for our users.

✔ Capabilities We've Already Shipped

Workflow	ezyVet Requires...	VetAgent Has...
Post-visit follow-up emails	ClinicWise, Weave, or manual templates	Vera auto-generates personalized, tone-aware follow-ups from SOAP notes
Appointment reminders	PetDesk (\$\$\$), Weave (\$\$\$)	Built-in owner portal with automated notifications
Medical dictation / AI scribe	myBalto Foundation add-on	Vera generates SOAP notes, pre-exam briefs, and discharge summaries
Risk assessment	None — entirely manual	Automated risk scoring on every appointment card
Intake processing	Basic digital forms	AI-powered flag extraction — identifies concerns before the vet enters the room
Online booking	PetDesk Direct Booking add-on	Native owner self-scheduling portal
Review solicitation	ReviewTree, Customer Radar	Planned — one-click post-invoice trigger

[!IMPORTANT] **This is our core differentiator.** ezyVet needs 15+ partner integrations to approximate what Vera does natively. Each of those partners adds cost, login friction, and data fragmentation for the clinic.

The 6 Partnerships That Matter

Our analysis identified six strategic integrations that would cover **>90% of the functionality** clinics rely on from ezyVet's ecosystem. These are capabilities that genuinely require external partners — they can't be replicated with software alone.

1. 🦋 IDEXX VetConnect PLUS — Lab Results & Ordering

Why it matters	~60% of US veterinary clinics use IDEXX analyzers. Lab integration is table stakes.
What it does	Order reference lab tests, receive results directly into patient records, trend historical values
API availability	✔ Well-documented partner API — requires IDEXX partnership application
Effort	4–6 weeks
Priority	🔴 Critical — #1 integration to pursue

2. 💵 Stripe — Payment Processing

Why it matters	Every invoice we generate needs a "Pay Now" button
What it does	Card payments, terminal readers, payment links, automatic reconciliation
API availability	✔ Public, self-service — best-in-class developer docs
Effort	2–3 weeks
Priority	🔴 Critical

3. 📊 Xero — Accounting & Financial Reporting

Why it matters	Practice owners need P&L, tax reporting, and bookkeeper access
What it does	Auto-sync invoices, categorize revenue, generate financial statements
API availability	✔ Public OAuth2 API
Effort	3–5 days
Priority	🟡 High

4. 🛡️ Trupanion — Insurance Direct Pay

Why it matters	Trupanion's direct-pay model settles claims at checkout — clients love it
What it does	Verify coverage, submit claim, receive payment — all within the invoice flow
API availability	✔ Partner API available
Effort	2–3 weeks
Priority	🟡 High

5. 🍌 Vetcove — Product Ordering & Home Delivery

Why it matters	Clinics need to order supplies and offer client-direct Rx shipping
What it does	Compare distributor pricing, place orders, sync inventory, ship Rx to pet owners
API availability	🟡 Partner-only — requires outreach to partnerships team
Effort	4–6 weeks (once API access granted)
Priority	🟡 High

6. 🏠 DICOM Imaging — Digital X-rays & Ultrasound

Why it matters	Every clinic with digital X-ray needs images viewable in the patient record
What it does	Query/retrieve/display medical images from PACS servers
API availability	✔ DICOM is an open standard (DICOMweb REST API)
Effort	3–4 weeks for viewer; 6–8 for full PACS integration
Priority	🟡 Medium

Competitive Positioning

Integration Strategy Matrix			
BUILD NOW (EASY + HIGH IMPACT) Revenue Dashboards · Stripe Payments · Review Requests · Inventory Mgmt · Zoom Telehealth	PARTNER STRATEGICALLY (HARD + HIGH IMPACT) IDEXX Labs · Xero Accounting · Trupanion Insurance · Vetcove Ordering · DICOM Imaging		
	DEFER (HARD + LOW IMPACT) Controlled Drugs · Regional Labs	MONITOR (EASY + LOW IMPACT) Microchip Registries	

Head-to-Head: VetAgent vs. ezyVet

Capability	ezyVet	VetAgent	Advantage
AI-Generated SOAP Notes	✗	✔	VetAgent
AI Follow-Up Emails	✗	✔	VetAgent
AI Risk Scoring	✗	✔	VetAgent
AI Intake Processing	✗	✔	VetAgent
Real-Time AI Assistant	✗	✔ Vera	VetAgent
Pre-Exam Briefing	✗	✔	VetAgent
Multi-Clinic Management	✔	✔	Tie
Lab Integration (IDEXX)	✔	📅 Planned	ezyVet (for now)
Payment Processing	✔	📅 Planned	ezyVet (for now)
Accounting (Xero)	✔	📅 Planned	ezyVet (for now)
Insurance Direct Pay	✔	📅 Planned	ezyVet (for now)
Total Integrations	74	~10	ezyVet
Per-Seat Pricing	\$\$\$\$	TBD (lower)	VetAgent

[!TIP] **The narrative for sales:** "ezyVet needs 74 bolt-on integrations because their core platform can't do what Vera does out of the box. We ship intelligence, not invoices to third-party vendors."

Recommended Roadmap

Integration Roadmap — 2026			
PHASE 1 — QUICK WINS · JUL			
Revenue Dashboard	Stripe Payments	Review Emails	Inventory Catalog
PHASE 2 — STRATEGIC PARTNERS · AUG–SEP			
IDEXX Partnership	IDEXX VetConnect	Xero OAuth	Trupanion Direct Pay
PHASE 3 — MARKET EXPANSION · Q4			

Vetcove Partnership	DICOM Viewer	CareCredit
---------------------	--------------	------------

Phase 1: Quick Wins (July — 2 weeks)

Ship 5 features that require zero external partnerships, demonstrating momentum to early-adopter clinics.

Phase 2: Strategic Partners (August–September)

Secure IDEXX and Xero — the two integrations most commonly cited as "must-haves" in clinic software evaluations.

Phase 3: Market Expansion (Q4 2026)

Layer on pharmacy, imaging, and financing to match the integration depth expected by mid-market and enterprise veterinary groups.

Investment Summary

Phase	Integrations	Est. Engineering	Key Outcome
1	5 native features	2 weeks	Payment-ready MVP with analytics
2	3 partner APIs	6–8 weeks	Lab + accounting = enterprise-ready
3	4 partnerships	8–10 weeks	Full-stack competitor to ezyVet
Total	12 integrations	~4 months	Functional parity on what matters, AI superiority everywhere else

Closing Perspective

ezyVet's integration count is impressive on paper, but it masks a fundamental weakness: **ezyVet is a plumbing system that relies on 74 external partners to deliver a complete experience**. Every integration adds licensing cost, onboarding friction, and data silos for the practice.

VetAgent takes the opposite approach. **Vera is the integration**. AI-powered workflows replace entire categories of bolt-on tools — from medical scribing to client communication to risk assessment. The handful of external partnerships we *do* need (labs, payments, accounting) are well-defined, API-accessible, and achievable within a single quarter.

The path forward isn't to match ezyVet integration-for-integration. It's to make the case that **6 smart partnerships + Vera** outperform **74 dumb pipes**.
